

## Electric Boom Lift Attachments

Electric Boom Lift Attachments - Type "E" lift trucks meet the minimum requirements for electrical hazards and fire. This is actually the most common label applied for electric trucks. Trucks described as type "E" cannot be used in dangerous places. Type "ES" lift trucks meet all the requirements of Type "E" forklifts and have added equipment so as to avoid the emission of sparks and control the surface temperature of forklift components.

The more specialized lift trucks are the type "ES" electric vehicle and these are not typically found in the marketplace. Type "EE" forklifts meet all the standards of the ES and E model and have all electric motor and spark producing parts totally enclosed. The type "EE" model is therefore used wherever hazardous environments have been identified. Type "EX" forklifts are particularly meant for use in surroundings where dust or vapors or flammable fibers could be present. These types of forklifts are constructed utilizing no spark generating components together with various protective measures so as to ensure optimum safety in the dangerous applications they can be utilized for.
