

Fork Positioner for Forklifts

Forklift Fork Positioner - A fork positioner is a tool made out of high quality materials meant to be able to endure the most demanding procedures and work environments. This particular piece of equipment could enable the one driving to be able to operate the forks hydraulically without leaving the seat. Side shifting units have the added ability to laterally position the arms or the entire load so as to facilitate more accurate carrying and placement in a faster and more effective manner.

The blade pocket is quite unique and enables the operator to be able to securely sway the blades into position without any fear of damaging the positioning cylinders. This allows the driver the alternative to be able to execute independent or simultaneous fork movement, depending on the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are needed. Standard OEM carriages could be converted into blade positioners on existing units.
